

Todo App UI change

1. Current UI

- One input field where the user can add a simple todo.
- Each todo is display as a single row with a Delete button.

Ex:

Learn React

Learn spring boot

Learn Java

2. New UI Requirement

- Each todo should now behave like a main topic/ container.
- Inside each topic, the user should be able to sub-topics/items .

Ex:

Topic : Learn Java

- Learn OOP concepts
- Learn Lambda
- Learn Stream API

3. Main Pages

A. Todo Topics Page

This is the main page of the app.

Features:

- Add new topic

- View all topic
